

# ANGLIN'S DON'T REPLACE IT...RAISE IT

How you can save your sinking concrete slab and **WHY...**

BEFORE

AFTER

Driveway, sidewalk, foundation floors etc.—  
If your concrete has settled or is uneven, **we can help!**

## What types of problems can concrete raising fix?

Some common areas we raise, level and repair are concrete slab patios, front porches, driveways, sidewalks, garage & parking slabs, steps, and pool decks.

## Benefits to Raising Concrete with Polyurethane Foam

- ✓ **COST EFFECTIVE:**  
Concrete raising is typically about half the cost of replacing the same concrete. Ultimately, the cost of raising or stabilizing concrete is a direct reflection of how much leveling material the project will require.
- ✓ **TIME:**  
Ready to use immediately! As oppose to taking out the old slab, framing the new slab, and waiting th to set up.
- ✓ **CLEAN WORK ENVIRONMENT:**  
No concrete or grout splatter and no wash down needed.
- ✓ **SMALL HOLES:**  
Polyurethane concrete raising drills a nearly invisible 5/8 inch hole and the process calls for considerably fewer holes than traditional mudjacking; Minimal patchwork needed.
- ✓ **LIGHTWEIGHT:**  
This material will never lose density, is permanent and weighs only about 2 lbs. per cubic foot. Compared to traditional Mudjacking material weighs on average 100 lbs per cubic foot.
- ✓ **GREEN:**  
The poly foams we use are environmentally friendly, consisting of 39-49% renewable and recycled materials. HMI poly foam is a top-of-the-line material, designed specifically for different concrete applications, it allows us to easily adjust our approach to your needs.
